

How to use the SUN Interactive Habitat Map (IHM) to find GSP Restoration Sites

Go on-line to <http://www.seattleurbannature.org/Survey/ihm.html>. Using the “Zoom to a Park” function on the right hand side of the screen, select your park from the list (in the example below, we zoomed to Fauntleroy Park). If you would like to see an aerial photo of the park, select “satellite” on the upper right side of the map.

To view the GSP data currently displayed on the SUN IHM, click the box that says “GSP Project Sites” on the right side of the screen underneath the list of park names. All of the GSP sites in the park will be displayed with blue balloons—if you click on a balloon, a pop-up box will appear displaying the name of the park, and the name of the site (as it is in the current database).

Please review each GSP site name and location in the park. If you notice any discrepancies between what is displayed on the map and what you call a site and/or where it is located, please contact sarah@seattleurbannature.org or call the SUN office at 206-522-0334. Thanks!
